BP Amoco Solar Challenge

(UK, 05/02/2000) BP Amoco is helping the world to harness solar power to reduce dependency on coal and oil. We are determined to lead the way by providing a solar knowledge network for the exchange of ideas, creative technical openings and inspiration.

To facilitate this we are creating an on line forum. We are initially focusing on two main areas: The first is to help us design the best ways to put solar panels into houses and offices buildings, known as BIPV (Building Integrated Photovoltaics). The second is to help us design a manufacturing process and factory which would reduce the cost of crystalline solar modules by 50% - a 21st century Solarplant.
